Overview

5+ years of agency work, primarily in Elixir, fully remote for the last four. I am currently the lead developer for a Phoenix monolith: a customer portal that has processed over 100,000 orders, averaging 1-3 million dollars in daily sales. I develop and deploy new features as well as provide support and troubleshooting. I work with another client developing a B2B sales application in Phoenix and LiveView, which was recently converted into a multi-tenant architecture. Experienced with LiveView, Oban, Ecto, GenServer, Mox and other Elixir tooling and libraries.

Summary of Qualifications

- *Expert in:* Elixir, Phoenix, LiveView, JavaScript, PostgreSQL
- *Proficient in:* Ruby, Rails, SvelteKit,
- *Experience with:* AWS Cloudformation, Python

Relevant Experience & Work

Objective Inc

Staff Developer

Jun 2022-Present

Junior Developer

Sep 2020- Jun 2022

Associate Developer

Sep 2019- Sep 2020

- Developing a B2B sales portal with Phoenix and LiveView - I am the lead and often solo developer but have helped to onboard and upskill other developers as needed
 - TDD with ExUnit, Mox, Wallaby, and LiveView Tests
 - Migrated to a new multi-tenant setup to meet the needs of the growing business
 - Architected and built a drag-and-drop scheduling tool with LiveView and custom JS hooks
- Maintaining and adding features to a sales portal (1-3 million USD+ daily) which was written in Elixir with the Phoenix framework. Continuously improving and adding new features
 - Improved front-end performance with JavaScript and Phoenix templates implementing LiveView
 - Transitioned from a legacy redis backed job processor to Oban
 - Migrated from Brunch to Webpack
 - Implemented Mox for more reliable testing of SAP and AWS SES endpoints
- Other contributions for client projects in Rails, SvelteKit and CraftCMS

Persona

Mar 2019 -Aug 2019

Co-Founder & Frontend Developer (React)

- Start up aiming to provide training analytics and metrics to athletes
